PROFESSIONAL SUMMARY

Aspiring Data Scientist with working experience in machine learning, deep learning, and agentic AI systems. Knowledge of Python programming language, mathematical statistics, and modern approaches to large language models and RAG. A strong ability to design and implement complete machine learning pipelines, from data preparation and model training to deployment, reflected in the creation of an open-source Python library and several production-ready AI applications.

CORE COMPETENCIES

- Programming Languages: Python, JavaScript, HTML, CSS
- Machine Learning & Statistics: Regression, Classification, Clustering, Time Series Forecasting (ARIMA, SARIMA), Drift Detection
- Deep Learning & GenAI: TensorFlow/Keras, PyTorch, LSTM, GRU, CNN, LLM APIs (Gemini, Groq), RAG, LangChain, Hugging Face Transformers
- Data Visualization & Dashboards: Streamlit, Matplotlib
- Frameworks & Tools: Git, Docker, GitHub Actions (CI/CD), Pytest, PyPI
- Databases: MongoDB, ChromaDB (Vector Store)

PROFESSIONAL EXPERIENCE & PROJECTS

Drift Monitoring Library

Personal Project | Published on PyPI

- Built and published a reusable Python library for ML data drift, outlier, and data quality monitoring, with automated statistical detection and HTML/console reporting.
- Achieved 85% test coverage across 42 automated tests, with GitHub Actions CI integration for quality checks.

Electricity Demand Forecasting — End-to-End ML Pipeline

Personal Project

- Built a forecasting pipeline comparing 15+ models across statistical, ML, and deep learning families, achieving 2.05% MAPE with LightGBM — a 10x improvement over ARIMA/SARIMA baselines.
- Engineered time-aware features with leakage-free validation; deployed via a Dockerized Streamlit dashboard.

Jarvis DataScience — Agentic AI Desktop Assistant

Personal Project

- Built a full-stack agentic AI assistant combining AutoML, conversational AI, voice interaction, and computer vision in a single application.
- Designed an AutoML pipeline with automatic task detection and multi-model benchmarking, plus a RAG-based agent with long-term memory (ChromaDB) and local speech-to-text.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

- AVN Institute of Engineering and Technology, Hyderabad | Completed: July 2025 | CGPA: 6.79

Intermediate Education MPC

- Narayana Junior College, Vanasthalipuram, Hyderabad | 2021 | Percentage: 70.6%

SSC Education

- Brilliant High School, Turkayamjal, Hyderabad | 2019 | Percentage: 80.6%

CERTIFICATIONS & COMPETITIONS

Full Stack Data Science & AI — NareshIT Technologies (ISO 9001:2015 Certified), October 2025 – March 2026

Umesh Chandra Kiran Chilukuri

Hyderabad India | 8333962206 | umeshchilukuri@gmail.com | [LinkedIn](#) | [Github](#)

ABOUT ME

Computer Science graduate with hands-on experience in full-stack web development and microservices. Built real-world applications including WeShopify (an end-to-end e-commerce system), a Swiggy-like restaurant finder. Skilled in Java, Spring Boot, React, MongoDB, MySQL, and Kafka. Quick learner with a strong problem-solving mindset and deep interest in scalable backend systems.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, Cpp
Frameworks & Libraries: Spring Boot, React.js, Node.js, Express.js
Databases: MySQL, MongoDB,
Tools & Platforms: Kafka, Eureka, Postman, Git, Docker , AWS, Vercel.
Others: JWT, REST APIs, Microservices Architecture,

PROJECTS AND EXPERIENCE

Restaurent Finder

LIVE URL:[RESTAURENT FINDER](#)

Developed a comprehensive "Restaurant Finder" application that serves as a functional clone of Swiggy. This project replicates all core features of Swiggy, including restaurant discovery, menu browsing, and order placement. The application leverages data from the Swiggy API to deliver real-time information on restaurants. The user interface is designed to provide a seamless and intuitive experience, ensuring users can easily find and order from their favorite restaurants. This project demonstrates advanced skills in API integration, frontend development, and user experience design.

WeShopify – E-Commerce Microservices System

Role: Full Stack Developer

Built a complete microservices-based e-commerce application with modules for product, order, payment, and user management. Integrated API Gateway, Eureka service discovery, and Keycloak for secure authentication and authorization. Implemented inter-service communication using Kafka and used Redis for caching. Observability handled via Zipkin, Grafana, and Prometheus.

Ticket Booking Consumer Application

I built a Ticket Booking Consumer Application using Spring Boot with Thymeleaf for the front-end, where the application communicates with a predefined REST API through RestTemplate. It consumes the external API to fetch available tickets, show event details, and make bookings. Users can search for events, view ticket availability, and confirm bookings directly through the Thymeleaf-based UI, while all business operations are handled by the external REST API.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

AVN Institute of Engineering And Technology ,Hyderabad .

Completed: July 2025

CGPA : 7.79

INTERMEDIATE EDUCATION

New Vision Junior College, Khammam.

Percentage: 98.2%.

ABOUT ME

Computer Science graduate with hands-on experience in full-stack web development and microservices. Built real-world applications including WeShopify (an end-to-end e-commerce system), a Swiggy-like restaurant finder. Skilled in Java, Spring Boot, React, MongoDB, MySQL, and Kafka. Quick learner with a strong problem-solving mindset and deep interest in scalable backend systems.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, Cpp
Frameworks & Libraries: Spring Boot, React.js, Node.js, Express.js
Databases: MySQL, MongoDB, Redis
Tools & Platforms: Kafka, Eureka, Keycloak, Postman, Git, Docker , AWS, Vercel.
Observability Stack: Zipkin, Grafana, Loki, Tempo.
Others: JWT, REST APIs, Microservices Architecture,

PROJECTS AND EXPERIENCE

Restaurent Finder

LIVE URL:[RESTAURENT FINDER](#)

Developed a comprehensive "Restaurant Finder" application that serves as a functional clone of Swiggy. This project replicates all core features of Swiggy, including restaurant discovery, menu browsing, and order placement. The application leverages data from the Swiggy API to deliver real-time information on restaurants. The user interface is designed to provide a seamless and intuitive experience, ensuring users can easily find and order from their favorite restaurants. This project demonstrates advanced skills in API integration, frontend development, and user experience design.

WeShopify – E-Commerce Microservices System

Role: Full Stack Developer

Built a complete microservices-based e-commerce application with modules for product, order, payment, and user management. Integrated API Gateway, Eureka service discovery, and Keycloak for secure authentication and authorization. Implemented inter-service communication using Kafka and used Redis for caching. Observability handled via Zipkin, Grafana, and Prometheus.

Ticket Booking Consumer Application

I built a Ticket Booking Consumer Application using Spring Boot with Thymeleaf for the front-end, where the application communicates with a predefined REST API through RestTemplate. It consumes the external API to fetch available tickets, show event details, and make bookings. Users can search for events, view ticket availability, and confirm bookings directly through the Thymeleaf-based UI, while all business operations are handled by the external REST API.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

AVN Institute of Engineering And Technology ,Hyderabad .

Completed: July 2025

CGPA : 7.79
